

# Fact Sheet 2018

## What is S4FE?

S4FE is a global network based on blockchain technology for the registration of (stolen or lost) property, i.e. valuables or objects. The network is accessible to everyone and allows users to register, search, verify and identify objects in the blockchain. Such objects can represent almost any form of property that represents value to owners.

## What are S4FE's Objectives?

S4FE offers access to a technology that enables the protection of property and to check and identify objects found or offered for sale. The principal goal is to address the growing global problem of theft as well as to reduce related crimes such as receiving and acquisitive crime. Security is a fundamental public need. S4FE's goal is to provide security to all users for their property and for trade in goods.

## How Does it Work?

S4FE has developed an easy-to-use interface through which users can perform the following functions:

- Register property / objects in the network anonymously
- Report theft or loss in real time
- Make stolen goods recognizable to all users worldwide
- Check or identify found and offered items
- Report stolen or lost items on the network
- Rewards for discovering and returning of objects

## Is There a Market?

Theft is a growing global problem and one of its causes is that ownership is not always clearly identifiable. There is no search engine that allows a real-time search for stolen or lost objects. S4FE closes this gap through a public network in which objects are pre-registered. Those objects can be searched for or they can be verified, whether stolen or lost, for example when an object is found or sold as stolen property. This unmet market demand has a potential of over one billion lost and stolen objects, representing the possibility of over one billion transactions for S4FE.

**Prevent**

**Reward**

**Protect**

**Identify**

## Facts

1 billion lost objects annually  
500 million lost objects worldwide annually (USA / DE)

Market Potential  
> 1,000,000,000 cases = transactions

> 20,000,000 stolen objects annually (EU)  
only an average of 25% of all thefts and losses are reported.

Market Share  
0.1% cases = 1,000,000 transactions

## Four Profit Centres

S4FE has developed four profit centres, which will generate revenue for the company and at the same time allow it to offer its core functions (register, check, identify and report) for free:

### Commission on rewards:

When a user (finder) discovers an object that is reported lost or stolen, a first reward (finder's reward) is granted. If this discovery leads to the object being returned to the rightful owner, a second reward (success fee) is granted. The amount of rewards is determined by the property owner in Ether when they report an object as lost or stolen. S4FE receives a commission of 25% of all rewards paid out.

### Public Cooperation:

S4FE will cooperate with public partners. Such partners include law enforcement agencies, government organizations, and any institution related to crime in general or its control. The partners will use the system to improve their own success rate and efficiency, which in turn lead to a higher volume of rewards from which S4FE will benefit.

### Commercial Cooperation:

S4FE will also partner with companies that want to expand their portfolios by integrating the system to add value to their customers. Such companies include insurance companies, travel and tourism companies, manufacturers, retailers and wholesalers, and rental companies. This will further increase the volume of rewards.

### Online Shop:

S4FE will market it's own products via an online shop and constantly develop new products. A satellite tracking device, the S4FE Tracker, as well as an own coding system, the S4FE COD3, are already in development.

In addition, S4FE will offer services to commercial clients in the areas of risk assessment and forecasting. There is a high demand for such a service from companies whose business models and strategies are based on this type of data.

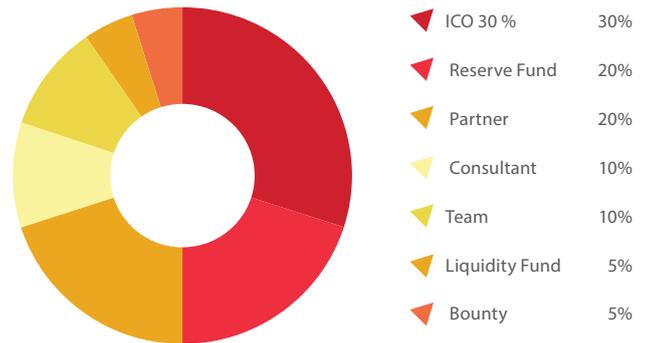

Token prices are determined in Ether before the sale. The sale is being conducted with fixed prices and is measured in blocks on the Ethereum Blockchain until 300 Million tokens are sold.

The S4FE Token is based on the ERC-20 Token Standard.

## Use of Funds

## Token Allocation

## Token Facts

- Token Name: S4FE
- Token Category: Utility Token
- Network: Ethereum
- Start of token sale: Q4 2018
- Amount issued: 1.000.000.000
- Type of issue: Fixed
- Soft Cap: 5.000.000 US \$
- Hard Cap: 50.000.000 US \$
- Currencies: BTC, ETH, BCH, XRP, FIAT
